$\Lambda(2350) \ 9/2^{+}$ 

$$I(J^P) = O(\frac{9}{2}^+)$$
 Status: \*\*\*

DAUM 68 favors  $J^P=7/2^-$  or  $9/2^+$ . BRICMAN 70 favors  $9/2^+$ . LASINSKI 71 suggests three states in this region using a Pomeron + resonances model. There are now also three formation experiments from the College de France-Saclay group, DEBELLEFON 77, BACCARI 77, and DEBELLEFON 78, which find  $9/2^+$  in energy-dependent partial-wave analyses of  $\overline{K}N \to \Sigma \pi$ ,  $\Lambda \omega$ , and  $N\overline{K}$ .
